Diba Shankar Mishra during NESW 2021 State Level Inaugural Commencement.

Safety Zone Creation, A Path to Mission Zero Harm

A collaboration of technology and robust safety measures in electrical distribution system

Introduction

The new era has dawned rich with promises for providing a safe workplace and consumer safety at Odisha Discom. Every organization enthusiastically exploring fresh avenues and strategies for further enhancement of safety performance and germinate interesting in new approaches. To breed a path-breaking safety culture among the employees, adoption of robust safety measures and initiatives towards the aim "Mission Zero Harm" with a collaboration of new edge of technology are essential. There is a unique concept called "Safety Zone Creation" which to be practiced for establishing "Zero Harm" at workplace. Focus to be given towards hierarchy of risk control with help of technologies and following the electrical safety guidelines.

This article gives a detailed guide on "Safety Zone Creation" while working on electrical lines. The complete safety of workplace can be achieved by applying some of the safe practices, technologies and personal protective equipment. This Safety Zone is going to provide an assurance of zero harm to the workman during working in electrical installation.

Scope of application

Safety zone creation can be applicable in any electrical installation irrespective of Generation, Transmission and Distribution. It is effective for activities related any substation and electrical lines.

Purpose

To provide safe workplace and safe working environment for employees

Objective

- Adherence to Organization's Safety Goal
- Adherence to legal requirement
- Conforming Employee Safety

Importance of "safety zone"

Electricity is very essential for our daily life and easy to use but if it's mishandled during operation and maintenance work, it can cause major injury and sometimes deadly fatal injury. The main objective of the safety zone creation is to establish the electrical maintenance work in such a manner that prior to work execution by following three basic electrical rules i.e.,

- **Test & Isolate Before Touch,**
- **Ensure Job Safety while Working,**
- **Use PPE's (Personal Protective Equipment) Before Work.**

In the transmission and distribution sector breakdown and planned shutdown is common for all but it's not that easy to execute the work. A minor mistake on isolation of live line can cost loss of life and damage of the equipment. We can execute the work without any injury or damage by creating a Safety Zone at the workplace. In our daily routine of operation it is necessary to follow the steps like taking a valid permit to work,
